

PRIVATE INNOVATION COMPETENCE CENTER (PICC)

To stimulate innovation, collaboration and the sharing of ideas.

Transpose knowledge and savoir-faire into a graphical format easy to understand

Use artificial intelligence to read and understand documents

Systematically aggregate knowledge from different projects and problem solving sessions

THE SOLUTION TO **AGGREGATE**
ALL **YOUR KNOWLEDGE**
AND **YOUR SAVOIR-FAIRE**
ON A SINGLE PLATFORM.

PRIVATE INNOVATION COMPETENCE CENTER (PICC)

To stimulate innovation, collaboration and the sharing of ideas.

THE BIG PICTURE

Faced with ever increasing expectations, firms optimize their business model while introducing innovations to attract or retain market shares. For leaders, this can mean considerable investment in R & D activities.

Preserving talents and preventing the loss of «know how» becomes capital.

Efforts have been made to develop knowledge management systems. Often difficult to maintain these programs do not capture the «savoir-faire» of the employee, they document just what has been achieved. To solve a problem, the software does not guide the innovation process.

PICC allows companies to capture tacit knowledge of employees as well as knowledge contained in patents and other documents.

PICC help find innovative solutions making the best use of the TRIZ methodology and the latest research from different laboratories working on innovation engineering.

PICC helps companies to aggregate local and global expertise (savoir-faire) from different entities (departments, countries, regions, etc.)

PICC uses artificial intelligence to read and understand documents

WHAT YOU GET

Ability to capitalize the «know-how» despite the come-and-go of employees

Using artificial intelligence and «cloud computing» technology to automatically exploit patents and scientific papers

Reuse knowledge (experiences) acquired from past projects

Systematize innovation

Technology forecasting

Ability to model a problem or a network of problems

Point to standard solutions

Take into account the changing environment (eco-system)

Measure the quality of a solution concept (before prototyping)

Address technical and non-technical problems

WHAT WE DO

We train your PICC team on advanced problem solving methodologies and tools.

We assist in developing a robust and measurable innovation process.

We coach and assist with complex projects, providing tools and expertise.
